Patent No. 6551795

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUCINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: ABRUCINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/094,190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .

Sequence 13, Application US/09131028A

Patent No. 6287866

GENERAL INFORMATION:
APPLICANT: Abbort Laboratories
APPLICANT: Mukerji, Pradip
APPLICANT: Lemmel, Steven A.
APPLICANT: Lemmel, Steven A.
APPLICANT: Lemmel, Steven A.
APPLICANT: Lemmel, Steven A.
TILE OF INVENTION: BETA-CASEIN EXPRESSING
TILE REFERENCE: 6004.US.Pl
CURRENT APPLICATION NUMBER: US/09/131,028A
CURRENT APPLICATION NUMBER: US 09/064,440

PRIOR APPLICATION NUMBER: US 08/064,440

PRIOR FILING DATE: 1993-05-21

NUMBER OF SEQ ID NOS: 22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    US-09-131-028A-13

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                         September 8, 2004, 12:51:54; Search time 12.2 Seconds (without alignments) 67.706 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 447,

Sequence 6599, Application US/09328352
Patent No. 6562958
GENERAL INFORMATION:
APPLICAMY: 6ary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GT-99-0378
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
LENGTH: 272

Sequence 16, Application US/08262037
Patent No. 5747239
GENERAL INFORMATION:
TITLE OF INVENTION: SYNTHETIC PEPTIDES SPECIFIC FOR
TITLE OF INVENTION: THE DETECTION OF ANTIBODIES TO HCV, DIAGNOSIS OF HCV
TITLE OF INVENTION: INFECTION AND PREVENTION THEREOF AS VACCINES
TITLE OF SEQUENCES: 136
CORRESPONDENCE ADDRESS:
ADDRESSEE: MORGAN & FINNEGAN
STREET: 345 PARK AVE.
CITY: NEW YORK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .

Patent No. 5747239

Patent No. 5747230

Patent No. 5747230

Patent No. 5747230

Patent No. 5747230

APPLICANT: Chang Yi Wang and Barbara Hosein

APPLICANT: Chang Yi Wang and Barbara Hosein

TITLE OF INVENTION: SYNTHERIC PEPTIDES SPECIFIC FOR

TITLE OF INVENTION: THE DETECTION OF ANTIBODIES TO HCV, DIAGNOSIS OF HCV

TITLE OF INVENTION: INFECTION AND PREVENTION THEREOF AS VACCINES

NUMBER OF SEQUENCES: 136

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        40.2%; Score 41; DB 1; Length 47; 55.6%; Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                 8, 2004, 12:51:54; Search time 12.2 Seconds (without alignments) 67.706 Million cell updates/sec

TITLE OF INVENTION: BINDING PEFTIDES FOR CARCINOEMBRYONIC
TITLE OF INVENTION: BINDING PEFTIDES
FILE REPERENCE: DYX-016.1 (3421.1005-001)
CURRENT APPLICATION NUMBER: US/09/825,517A

CURRENT FILING DATE: 2003-03-24

PRIOR FILING DATE: 2000-04-03

NUMBER OF SEQ ID NOS: 151

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 45

LENGTH: 16

TYBE: PRT

ORGANISM: Artificial Sequence
FRAURE:
CTHER INFORMATION: CEA binding polypeptide

TITLE OF INVENTION: BINDING PEPTIDES FOR CARCINOEMBRYONIC
TITLE OF INVENTION: ANTIGEN (CEA)
FILE REFERENCE: DYX-016.1 (342.1.005-501)
CURRENT APPLICATION NUMBER: US/09/825,517A
CURRENT FILING DATE: 2003-03-24
PRIOR FILING DATE: 2000-04-03
NUMBER OF SEQ ID NOS: 15-1
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 38
LENGTH: 16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 16;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          92.2%; Score 95; DB 11; Length 16; 93.3%; Pred. Sequence 17516, Application US/09252991A

Sequence 17516, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

ADPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERENCE: 107196.136

CURRENT PAPLICATION NUMBER: US 60/074,788

PRIOR PRILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-28

PRIOR FILING DATE: 1998-02-28

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 17516

LENGTH: 612
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö,
